

## 1. Description

### 1.1. Project

|                 |                       |
|-----------------|-----------------------|
| Project Name    | stm429_oberon_station |
| Board Name      | STM32F429I-DISC1      |
| Generated with: | STM32CubeMX 6.11.0    |
| Date            | 04/12/2024            |

### 1.2. MCU

|                |               |
|----------------|---------------|
| MCU Series     | STM32F4       |
| MCU Line       | STM32F429/439 |
| MCU name       | STM32F429ZITx |
| MCU Package    | LQFP144       |
| MCU Pin number | 144           |

### 1.3. Core(s) information

|         |               |
|---------|---------------|
| Core(s) | Arm Cortex-M4 |
|---------|---------------|

## 2. Pinout Configuration

### 3. Pins Configuration

| Pin Number<br>LQFP144 | Pin Name<br>(function after<br>reset) | Pin Type | Alternate<br>Function(s) | Label                               |
|-----------------------|---------------------------------------|----------|--------------------------|-------------------------------------|
| 1                     | PE2                                   | I/O      | GPIO_EXTI2               | PS2_CLOCK_1                         |
| 2                     | PE3 *                                 | I/O      | GPIO_Input               | PS2_DATA_1                          |
| 3                     | PE4                                   | I/O      | GPIO_EXTI4               | PS2_CLOCK_2                         |
| 4                     | PE5 *                                 | I/O      | GPIO_Input               | PS2_DATA_2                          |
| 5                     | PE6 *                                 | I/O      | GPIO_Input               | PB3                                 |
| 6                     | VBAT                                  | Power    |                          |                                     |
| 7                     | PC13 *                                | I/O      | GPIO_Input               | PB4                                 |
| 8                     | PC14/OSC32_IN                         | I/O      | GPIO_EXTI14              | PB1                                 |
| 9                     | PC15/OSC32_OUT *                      | I/O      | GPIO_Input               | PB2                                 |
| 10                    | PF0                                   | I/O      | FMC_A0                   | A0                                  |
| 11                    | PF1                                   | I/O      | FMC_A1                   | A1                                  |
| 12                    | PF2                                   | I/O      | FMC_A2                   | A2                                  |
| 13                    | PF3                                   | I/O      | FMC_A3                   | A3                                  |
| 14                    | PF4                                   | I/O      | FMC_A4                   | A4                                  |
| 15                    | PF5                                   | I/O      | FMC_A5                   | A5                                  |
| 16                    | VSS                                   | Power    |                          |                                     |
| 17                    | VDD                                   | Power    |                          |                                     |
| 18                    | PF6 *                                 | I/O      | GPIO_Input               | PB6                                 |
| 19                    | PF7 *                                 | I/O      | GPIO_Input               | PB8                                 |
| 20                    | PF8 *                                 | I/O      | GPIO_Input               | PB7                                 |

| 140                   | PB9                                   | I/O      | LTDC_B7                  | B7                |
| 141                   | PE0                                   | I/O      | FMC_NBL0                 | NBL0 [SDRAM_LDQM] |
| 142                   | PE1                                   | I/O      | FMC_NBL1                 | NBL1 [SDRAM_UDQM] |
| 143                   | PDR_ON                                | Reset    |                          |                   |
| 144                   | VDD                                   | Power    |                          |                   |

\* The pin is affected with an I/O function

## 4. Clock Tree Configuration

## 5. Software Project

### 5.1. Project Settings

| Name                              | Value   |
|-----------------------------------|---|
| Project Name                      | stm429_oberon_station                                     |
| Project Folder                    | K:\projets\STM32\STMicroelectronics\stm429_oberon_station |
| Toolchain / IDE                   | STM32CubeIDE  |
| Firmware Package Name and Version | STM32Cube FW_F4 V1.27.1                                   |
| Application Structure             | Advanced  |
| Generate Under Root               | Yes   |
| Do not generate the main()        | No  |
| Minimum Heap Size                 | 0x0   |
| Minimum Stack Size                | 0x10000   |

### 5.2. Code Generation Settings

| Name  | Value                                 |
|---|---------------------------------------|
| STM32Cube MCU packages and embedded software                    | Copy only the necessary library files |
| Generate peripheral initialization as a pair of '.c/.h' files   | No                                    |
| Backup previously generated files when re-generating            | No                                    |
| Keep User Code when re-generating                               | Yes                                   |
| Delete previously generated files when not re-generated         | Yes                                   |
| Set all free pins as analog (to optimize the power consumption) | No                                    |
| Enable Full Assert  | No                                    |

### 5.3. Advanced Settings - Generated Function Calls

| Rank | Function Name       | Peripheral Instance Name |
|------|---------------------|--------------------------|
| 1    | SystemClock_Config  | RCC                      |
| 2    | MX_GPIO_Init        | GPIO                     |
| 3    | MX_DMA_Init         | DMA                      |
| 4    | MX_FMC_Init         | FMC                      |
| 5    | MX_LTDC_Init        | LTDC                     |
| 6    | MX_USART1_UART_Init | USART1                   |
| 7    | MX_SDIO_SD_Init     | SDIO                     |
| 8    | MX_SPI3_Init        | SPI3                     |
| 9    | MX_CRC_Init         | CRC                      |
| 10   | MX_RTC_Init         | RTC                      |

## 1. Power Consumption Calculator report

### 1.1. Microcontroller Selection

|           |               |
|-----------|---------------|
| Series    | STM32F4       |
| Line      | STM32F429/439 |
| MCU       | STM32F429ZITx |
| Datasheet | DS9405_Rev9   |

### 1.2. Parameter Selection

|             |     |
|-------------|-----|
| Temperature | 25  |
| Vdd         | 3.3 |

### 1.3. Battery Selection

|                   |                 |
|-------------------|-----------------|
| Battery           | Li-SOCL2(A3400) |
| Capacity          | 3400.0 mAh      |
| Self Discharge    | 0.08 %/month    |
| Nominal Voltage   | 3.6 V           |
| Max Cont Current  | 100.0 mA        |
| Max Pulse Current | 200.0 mA        |
| Cells in series   | 1               |
| Cells in parallel | 1               |

#### 1.4. Sequence

|                               |             |                           |
|-------------------------------|-------------|---------------------------|
| <b>Step</b>                   | Step1       | Step2                     |
| <b>Mode</b>                   | RUN         | STOP UDM (Under Drive)    |
| <b>Vdd</b>                    | 3.3         | 3.3                       |
| <b>Voltage Source</b>         | Battery     | Battery                   |
| <b>Range</b>                  | Scale1-High | No Scale                  |
| <b>Fetch Type</b>             | FLASH       | n/a                       |
| <b>CPU Frequency</b>          | 180 MHz     | 0 Hz                      |
| <b>Clock Configuration</b>    | HSE PLL     | Regulator LP Flash-PwrDwn |
| <b>Clock Source Frequency</b> | 4 MHz       | 0 Hz                      |
| <b>Peripherals</b>            |             |                           |
| <b>Additional Cons.</b>       | 0 mA        | 0 mA                      |
| <b>Average Current</b>        | 57 mA       | 100 $\mu$ A               |
| <b>Duration</b>               | 0.1 ms      | 0.9 ms                    |
| <b>DMIPS</b>                  | 225.0       | 0.0                       |
| <b>Ta Max</b>                 | 97.48       | 104.99                    |
| <b>Category</b>               | In DS Table | In DS Table               |

#### 1.5. Results

|               |                   |                 |             |
|---------------|-------------------|-----------------|-------------|
| Sequence Time | 1 ms              | Average Current | 5.79 mA     |
| Battery Life  | 24 days, 10 hours | Average DMIPS   | 225.0 DMIPS |

#### 1.6. Chart

## 2. Peripherals and Middlewares Configuration

### 2.1. CRC

mode: Activated

### 2.2. FMC

#### SDRAM 1

Clock and chip enable: SDCKE1+SDNE1

Internal bank number: 4 banks

Address: 12 bits

Data: 16 bits

Byte enable: set

#### 2.2.1. SDRAM 1:

##### SDRAM control:

|                               |                                |
|-------------------------------|--------------------------------|
| Bank                          | SDRAM bank 2                   |
| Number of column address bits | 8 bits                         |
| Number of row address bits    | 12 bits                        |
| CAS latency                   | <b>3 memory clock cycles *</b> |
| Write protection              | Disabled                       |
| SDRAM common clock            | <b>2 HCLK clock cycles *</b>   |
| SDRAM common burst read       | <b>Enabled *</b>               |
| SDRAM common read pipe delay  | <b>1 HCLK clock cycle *</b>    |

##### SDRAM timing in memory clock cycles:

|                                    |            |
|------------------------------------|------------|
| Load mode register to active delay | <b>2 *</b> |
| Exit self-refresh delay            | <b>7 *</b> |
| Self-refresh time                  | <b>4 *</b> |
| SDRAM common row cycle delay       | <b>7 *</b> |
| Write recovery time                | <b>3 *</b> |
| SDRAM common row precharge delay   | <b>2 *</b> |
| Row to column delay                | <b>2 *</b> |

### 2.3. LTDC

Display Type: RGB565 (16 bits)

#### 2.3.1. Parameter Settings:

### Synchronization for Width:

|   |               |
|---|---------------|
| Horizontal Synchronization Width        | <b>144 *</b>  |
| Horizontal Back Porch                   | <b>213 *</b>  |
| Active Width                            | <b>1366 *</b> |
| Horizontal Front Porch                  | <b>70 *</b>   |
| HSync Width                             | 143           |
| Accumulated Horizontal Back Porch Width | 356           |
| Accumulated Active Width                | 1722          |
| Total Width                             | 1792          |

### Synchronization for Height:

|  |              |
|--|--------------|
| Vertical Synchronization Height        | 4            |
| Vertical Back Porch                    | <b>24 *</b>  |
| Active Height                          | <b>768 *</b> |
| Vertical Front Porch                   | <b>3 *</b>   |
| VSync Height                           | 3            |
| Accumulated Vertical Back Porch Height | 27           |
| Accumulated Active Height              | 795          |
| Total Height                           | 798          |

### Signal Polarity:

|                                     |                      |
|-------------------------------------|----------------------|
| Horizontal Synchronization Polarity | <b>Active High *</b> |
| Vertical Synchronization Polarity   | <b>Active High *</b> |
| Data Enable Polarity                | Active Low           |
| Pixel Clock Polarity                | Normal Input         |

### Layer Default Color:

|       |   |
|-------|---|
| Red   | 0 |
| Green | 0 |
| Blue  | 0 |

## 2.3.2. Layer Settings:

### Layer Default Color:

|                 |   |
|-----------------|---|
| Layer 0 - Alpha | 0 |
| Layer 0 - Blue  | 0 |
| Layer 0 - Green | 0 |
| Layer 0 - Red   | 0 |

### Windows Position:

|                                   |               |
|-----------------------------------|---------------|
| Layer 0 - Window Horizontal Start | 0             |
| Layer 0 - Window Horizontal Stop  | <b>1366 *</b> |

|   |                                       |
|---|---------------------------------------|
| Layer 0 - Window Vertical Start                             | 0                                     |
| Layer 0 - Window Vertical Stop                              | <b>768 *</b>                          |
| <b>Pixel Parameters:</b>                                    |                                       |
| Layer 0 - Pixel Format                                      | <b>L8 *</b>                           |
| <b>Blending:</b>  |                                       |
| Layer 0 - Alpha constant for blending                       | <b>255 *</b>                          |
| Layer 0 - Blending Factor1                                  | <b>Alpha constant x Pixel Alpha *</b> |
| Layer 0 - Blending Factor2                                  | <b>Alpha constant x Pixel Alpha *</b> |
| <b>Frame Buffer:</b>  |                                       |
| Layer 0 - Color Frame Buffer Start Address                  | <b>0xD0000000 *</b>                   |
| Layer 0 - Color Frame Buffer Line Length (Image Width)      | <b>1366 *</b>                         |
| Layer 0 - Color Frame Buffer Number of Lines (Image Height) | <b>768 *</b>                          |
| <b>Number of Layers:</b>                                    |                                       |
| Number of Layers  | <b>1 layer *</b>                      |

## 2.4. RCC

### High Speed Clock (HSE): Crystal/Ceramic Resonator

#### 2.4.1. Parameter Settings:

|                                |                                 |
|--------------------------------|---------------------------------|
| <b>System Parameters:</b>      |                                 |
| VDD voltage (V)                | <b>3 *</b>                      |
| Instruction Cache              | Enabled                         |
| Prefetch Buffer                | Enabled                         |
| Data Cache                     | Enabled                         |
| Flash Latency(WS)              | 5 WS (6 CPU cycle)              |
| <b>RCC Parameters:</b>         |                                 |
| HSI Calibration Value          | 16                              |
| TIM Prescaler Selection        | Disabled                        |
| HSE Startup Timeout Value (ms) | 100                             |
| LSE Startup Timeout Value (ms) | 5000                            |
| <b>Power Parameters:</b>       |                                 |
| Power Regulator Voltage Scale  | Power Regulator Voltage Scale 1 |
| Power Over Drive               | Disabled                        |

## 2.5. RTC

### mode: Activate Clock Source

#### 2.5.1. Parameter Settings:

##### General:

|                               |               |
|-------------------------------|---------------|
| Hour Format                   | Hourformat 24 |
| Asynchronous Predivider value | <b>124 *</b>  |
| Synchronous Predivider value  | <b>3999 *</b> |

## 2.6. SDIO

### Mode: SD 4 bits Wide bus

#### 2.6.1. Parameter Settings:

##### SDIO parameters:

|   |                                       |
|---|---------------------------------------|
| Clock transition on which the bit capture is made | Rising transition                     |
| SDIO Clock divider bypass                         | Disable                               |
| SDIO Clock output enable when the bus is idle     | Disable the power save for the clock  |
| SDIO hardware flow control                        | The hardware control flow is disabled |
| SDIOCLK clock divide factor                       | 0                                     |

## 2.7. SPI3

### Mode: Full-Duplex Master

#### 2.7.1. Parameter Settings:

##### Basic Parameters:

|              |           |
|--------------|-----------|
| Frame Format | Motorola  |
| Data Size    | 8 Bits    |
| First Bit    | MSB First |

##### Clock Parameters:

|                           |                       |
|---------------------------|-----------------------|
| Prescaler (for Baud Rate) | <b>8 *</b>            |
| Baud Rate                 | <b>5.25 MBits/s *</b> |
| Clock Polarity (CPOL)     | Low                   |
| Clock Phase (CPHA)        | 1 Edge                |

##### Advanced Parameters:

|                 |          |
|-----------------|----------|
| CRC Calculation | Disabled |
| NSS Signal Type | Software |

2.8. SYS

Debug: Serial Wire

Timebase Source: SysTick

2.9. USART1

Mode: Asynchronous

2.9.1. Parameter Settings:

|                      |                           |
|----------------------|---------------------------|
| Basic Parameters:    |                           |
| Baud Rate            | 115200                    |
| Word Length          | 8 Bits (including Parity) |
| Parity               | None                      |
| Stop Bits            | 1                         |
| Advanced Parameters: |                           |
| Data Direction       | Receive and Transmit      |
| Over Sampling        | 16 Samples                |

|    | PD7       | GPIO_Input  | Input mode  | No pull-up and no pull-down | n/a       | NRF24L01P_IRQ                       |
|    | PG9       | GPIO_Output | Output Push Pull  | No pull-up and no pull-down | Low       | NRF24L01P_CE                        |
|    | PG13      | GPIO_Output | Output Push Pull  | No pull-up and no pull-down | Low       | LD3 [Green Led]                     |
|    | PG14      | GPIO_Output | Output Push Pull  | No pull-up and no pull-down | Low       | LD4 [Red Led]                       |
|    | PB7       | GPIO_Output | Output Push Pull  | No pull-up and no pull-down | Low       | NRF24L01P_CS                        |

### 3.2. DMA configuration

| DMA request | Stream       | Direction            | Priority |
|-------------|--------------|----------------------|----------|
| SDIO_RX     | DMA2_Stream3 | Peripheral To Memory | Low      |
| SDIO_TX     | DMA2_Stream6 | Memory To Peripheral | Low      |

#### SDIO\_RX: DMA2\_Stream3 DMA request Settings:

Mode: **Peripheral Flow Control \***  
Use fifo: **Enable \***  
FIFO Threshold: Full  
Peripheral Increment: Disable  
Memory Increment: **Enable \***  
Peripheral Data Width: **Word \***  
Memory Data Width: Word  
Peripheral Burst Size: **4 Increment \***  
Memory Burst Size: **Single \***

#### SDIO\_TX: DMA2\_Stream6 DMA request Settings:

Mode: **Peripheral Flow Control \***  
Use fifo: **Enable \***  
FIFO Threshold: Full  
Peripheral Increment: Disable  
Memory Increment: **Enable \***  
Peripheral Data Width: **Word \***  
Memory Data Width: Word  
Peripheral Burst Size: **4 Increment \***  
Memory Burst Size: **Single \***

### 3.3. NVIC configuration

#### 3.3.1. NVIC

| Interrupt Table                         | Enable | Preenmption Priority | SubPriority |
|---|--------|----------------------|-------------|
| Non maskable interrupt                  | true   | 0                    | 0           |
| Hard fault interrupt                    | true   | 0                    | 0           |
| Memory management fault                 | true   | 0                    | 0           |
| Pre-fetch fault, memory access fault    | true   | 1                    | 0           |
| Undefined instruction or illegal state  | true   | 1                    | 0           |
| System service call via SWI instruction | true   | 15                   | 0           |
| Debug monitor                           | true   | 1                    | 0           |
| Pendable request for system service     | true   | 15                   | 0           |
| System tick timer                       | true   | 10                   | 0           |
| EXTI line2 interrupt                    | true   | 0                    | 0           |
| EXTI line4 interrupt                    | true   | 0                    | 0           |
| EXTI line[15:10] interrupts             | true   | 0                    | 0           |
| SDIO global interrupt                   | true   | 0                    | 0           |
| DMA2 stream3 global interrupt           | true   | 1                    | 0           |
| DMA2 stream6 global interrupt           | true   | 1                    | 0           |
| PVD interrupt through EXTI line 16      | unused |                      |             |
| Flash global interrupt                  | unused |                      |             |
| RCC global interrupt                    | unused |                      |             |
| USART1 global interrupt                 | unused |                      |             |
| FMC global interrupt                    | unused |                      |             |
| SPI3 global interrupt                   | unused |                      |             |
| FPU global interrupt                    | unused |                      |             |
| LTDC global interrupt                   | unused |                      |             |
| LTDC global error interrupt             | unused |                      |             |

#### 3.3.2. NVIC Code generation

| Enabled interrupt Table                 | Select for init sequence ordering | Generate IRQ handler | Call HAL handler |
|---|-----------------------------------|----------------------|------------------|
| Non maskable interrupt                  | false                             | true                 | false            |
| Hard fault interrupt                    | false                             | true                 | false            |
| Memory management fault                 | false                             | true                 | false            |
| Pre-fetch fault, memory access fault    | false                             | true                 | false            |
| Undefined instruction or illegal state  | false                             | false                | false            |
| System service call via SWI instruction | false                             | false                | false            |
| Debug monitor                           | false                             | true                 | false            |
| Pendable request for system service     | false                             | true                 | false            |
| System tick timer                       | false                             | true                 | true             |

| Enabled interrupt Table       | Select for init<br>sequence ordering | Generate IRQ<br>handler | Call HAL handler |
|-------------------------------|--------------------------------------|-------------------------|------------------|
| EXTI line2 interrupt          | false                                | true                    | true             |
| EXTI line4 interrupt          | false                                | true                    | true             |
| EXTI line[15:10] interrupts   | false                                | false                   | false            |
| SDIO global interrupt         | false                                | true                    | true             |
| DMA2 stream3 global interrupt | false                                | true                    | true             |
| DMA2 stream6 global interrupt | false                                | true                    | true             |
